DETAILED ACTION

Claim Rejections - 35 USC § 102

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

1. Claims 1-3 and 5 are rejected under 35 U.S.C. 102(e) as being anticipated by Jones et al. (US 6,817,887).

Jones et al. disclose a flexible flat connector (1) including:

a flat cable (5);

a socket (30);

a clamping member comprise casing (20) and a lid (21) having a limiting groove (217), a positioning axial (218), a positioning hole (219);

a locking plate (4) having a hook (412) and an integrated spring tongue (422);

an ear (204) engage projection (2160);

positioning portion (215).

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 2833

3. Claim 4 is rejected under 35 U.S.C. 103(a) as being unpatentable over Jones et al. (US 6,817,887).

Jones et al. substantially disclosed the claimed invention except for the ear being engaged to a matching hole.

Whether the ear being engaged to a matching hole or not would have been an matter of design absent the criticality, since the operation of the clamping member is still the same.

Allowable Subject Matter

4. Claim 6 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

5. The following is an examiner's statement of reasons for allowance:

The prior art of record fails to teach an expansion groove for the positioning hole is provided to the external circumference of the positioning hole of the locking plate.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
